Re Item V

**Reasoned statement with regard to novelty, inventive step or industrial applicability;
citations and explanations supporting such statement**

Reference is made to the following document:

D1: US-A-4 780 061

The document D1 is regarded as being the closest prior art to the subject-matter of claim 1 and shows (the references in parentheses applying to this document) a method of assembling a screw compressor assembly (thus resulting from "a method of assembling") with a body (14) coupled with a suction head (16) and with a delivery head (12).

The subject-matter of independent claim 1 differs from this known method in that various modular interchangeable units (namely the suction and the delivery heads) are manufactured and in that the selection and coupling of these units to the body takes place according to the desired configuration.

The subject-matter of independent claim 1 is therefore new (Article 33(2) PCT).

The problem to be solved by the present invention may be regarded as to obtain the constructional differences necessary for the various combinations desired by the client by manufacturing and assembling the modular parts accordingly.

The solution to this problem proposed in claim 1 of the present application is without example from the prior art and is therefore considered as involving an inventive step (Article 33(3) PCT).

Claims 2-13 (see point VIII here under) are dependent on claim 1 and as such also meet the requirements of the PCT with respect to novelty and inventive step.

Re Item VII Certain defects in the international application

Contrary to the requirements of Rule 5.1(a)(ii) PCT, the relevant background art document D1 is not identified in the description.
